## Create UI to Interact With Application:

The screenshot shows a Visual Studio Code editor with a file explorer on the left and a code editor in the center. The file explorer shows a project structure with folders like 'static' and 'templates', and files like 'profile.html'. The code editor displays the content of 'profile.html', which is an HTML form for updating user details. The form includes a header section with user information, a main form area with a dropdown menu for selecting a field to update, and a password update section. The code uses Bootstrap classes for styling and includes a form action for updating user details.
